

I claim:

1. A means for visually displaying the position of an animal's forehead relative to a vertical line extending from the ground; said means comprising:
a horseshoe shaped element;
a connecting means;
and a display unit comprising a window and an indicator;
said connecting means interconnecting the display unit and the horseshoe element.
2. A means as claimed in claim 1 further comprising:
the horseshoe element having two clips located on opposite sides of the horseshoe element and a slot in the connecting piece thereof.
3. A means as recited in claim 1 above further comprising:
the connection means being a bolt and a wingnut;
4. A means as recited in claim 1 above further comprising:
said display means comprising a circular indicator means having multiple colors thereon and visible through said window.
5. A means as recited in claim 1 above further comprising:
the horseshoe element having three slotted elements;
the display means connected to the horseshoe element by the connecting means comprised of a bolt and wingnut; and the display unit having contained therein an indicator element mounted on a pin; and
said indicator element rotatable on said pin and visible through said window of said display means.
